Introduction

Market Complexity

Investing demands significant time and deep expertise, often overwhelming individuals. Staying informed requires constant monitoring of volatile markets and complex data sources.

AI-Driven Solution

Our platform leverages Artificial Intelligence to automate complex market analysis and trading decisions. The AI continuously learns from data patterns to identify potential opportunities and risks.

Effortless Insights

We process vast amounts of diverse data—news, social sentiment, financials, market feeds—in real-time. This provides synthesized, actionable insights, removing the burden of manual research for the user.

Automated Management

The system intelligently manages portfolios through automated asset allocation, rebalancing, and risk controls. This ensures disciplined execution based on strategy parameters, not emotional reactions.

Objective

01

Democratize Sophisticated Strategies: Enable non-experts (e.g., retail investors, advisors) to execute institutional-grade strategies using natural language, breaking down barriers to advanced portfolio engineering.

02

Automate and Accelerate Complex Workflows: AI handles end-to-end execution—from idea generation (prompts) to research and portfolio optimization—slashing time and manual effort vs. traditional methods.

03

Fuse Cross-Domain Insights: AI agents systematically blend sentiment (news/social), fundamental, and technical signals, enabling holistic analysis vs. siloed approaches.

01

App Workflow

Authentication Flow

Display login form and authenticate user

Home Page

Display market overview with live indices data

New Analysis Page

Provide form for creating new analysis job

Job Status Page

Display real-time progress of selected job

Paper Trading Page

Display portfolio holdings and execute trades

Initialization

Load environment variables and configuration settings

Navigation System

Sidebar menu displays options based on current page

Dashboard Page

Fetch user's analysis jobs and display job list

Stock Research Page

Accept stock symbol input and run analyses

Job Processing Pipeline

Execute analysis steps sequentially

02

Sentimental Agent Workflow

03

Fundamental Agent Workflow

03

Backtesting Agent Workflow

Final Portfolio Breakdown

Stock	Buy Price (₹)	Shares	Invested (₹)	Gain %	Expected Gain (₹)
Indusind Bank	676.35	28	18937.80	16.54	3132.31
Patanjali Foods	1777.25	1	1777.25	12.57	223.40
ITC	404.95	3	1214.85	4.81	58.43
Ambuja Cements	524.80	1	524.80	7.80	40.93
Axis Bank	1048.70	13	13633.10	10.73	1462.83
Adani Enterprise	2218.45	1	2218.45	8.86	196.55

02

Final Portfolio Breakdown

Stock	Buy Price (₹)	Shares	Invested (₹)	Gain %	Expected Gain (₹)
Bajaj Finserv	1,853.45	1	1853.45	4.63	85.81
HAL Ltd.	4,004.85	1	4004.85	4.85	194.24
Hero Motocorp	3,531.85	1	3531.85	7.08	250.05
Tata Motors	582.55	1	582.55	5.75	33.50
NTPC	349.15	1	349.15	2.90	10.13
Total Portfolio			₹48,628.10		₹5,688.18

Future Aspects

Thank You
